## Retinal Exam

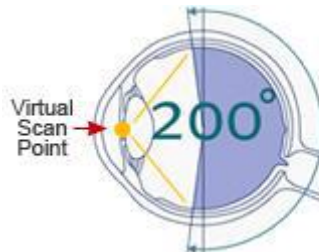

In our continued efforts to bring the most advanced technology to our patients, Dr. Abby and Dr. Caleb prefer the Optomap Retinal Exam as part of your comprehensive eye exam and prescribe it for all patients once per year.

Retinal imaging helps diagnose and monitor macular degeneration, glaucoma, diabetes, high blood pressure, retinal detachments, and other ocular and systemic diseases.

This non-invasive procedure becomes a permanent part of your medical file, enabling the doctors to make important annual comparisons when monitoring your eye health.

Conventional Exams  
(without dilation)

Optomap Retinal Exam  
(without dilation)

**The cost of the Optomap retinal imaging is \$39 and is not covered by insurance.**

Please initial one of the following:

\_\_\_\_\_ **PREFERRED:** Optomap Retinal Exam

- An in-depth view of the retinal layers (where diseases can start)
- The ability for you to view your Optomap image at the time of your exam

\_\_\_\_\_ Traditional dilation utilizing drops to dilate your pupil. This method requires 20 minutes to take effect and will dilate the pupils for 2-4 hours. Your vision will be temporarily blurry and sensitive to light. Complications from the drops are rare, but if you should experience pain in or around your eyes, hazy vision (halos around lights), or a sick feeling, please contact our doctors as soon as possible.

\_\_\_\_\_ I decline the Optomap retinal exam or a dilated fundus exam.
